## **INVESTOR PRESENTATION**

This communication is for informational purposes only. The information contained herein does not purport to be all-inclusive. The data contained herein is derived from various internal and external sources. No representation is made as to the reasonableness of the assumptions made within or the accuracy or completeness of any information contained herein. Any data on past performance is no indication as to future performance. Sonoma Pharmaceuticals, Inc. and its subsidiaries (“Sonoma” or, the “Company”) assumes no obligation to update the information in this communication. This presentation is not an offer to buy or the solicitation of an offer to sell Sonoma securities.

## **FORWARD-LOOKING STATEMENTS**

Except for historical information herein, matters set forth in this presentation are forward-looking within the meaning of the “safe harbor” provisions of the Private Securities Litigation Reform Act of 1995, including statements about the commercial and technology progress and future financial performance of Sonoma Pharmaceuticals, Inc. and its subsidiaries.

These forward-looking statements are identified by the use of words such as “believe,” “achieve,” and “expect,” among others. Forward-looking statements in this presentation are subject to certain risks and uncertainties inherent in the Company’s business that could cause actual results to vary, including such risks that regulatory clinical and guideline developments may change, scientific data may not be sufficient to meet regulatory standards or receipt of required regulatory clearances or approvals, clinical results may not be replicated in actual patient settings, the Company will not have sufficient capital to implement its business plan, invalidated or circumvented by its competitors, the available market for the Company’s products will not be as large as expected, the Company’s products will not be able to penetrate one or more targeted markets, revenues will not be sufficient to fund further development and clinical studies, uncertainties relative to fluctuations in foreign currency exchange rates, global economic conditions, prospective tariffs or changes to trade policies, as well as uncertainties relative to varying product formulations and a multitude of diverse regulatory and marketing requirements in different countries and municipalities, and other risks detailed from time to time in the Company’s filings with the Securities and Exchange Commission. The Company disclaims any obligation to update these forward-looking statements, except as required by law.

## **TRADEMARKS AND INTELLECTUAL PROPERTY**

All trademarks, service marks, and trade names of the Company and its subsidiaries or affiliates used herein are trademarks, service marks, or registered trademarks of the Company as noted herein. Any other product, company names, or logos mentioned herein are the trademarks and/or intellectual property of their respective owners.

# About Sonoma

Sonoma Pharmaceuticals is a global healthcare leader for developing and producing stabilized hypochlorous acid (HOCl) products for a wide range of applications, including wound care, eye care, dermatological conditions, podiatry, animal health care and non-toxic disinfectants. Sonoma's products are clinically proven to reduce itch, pain, scarring, and irritation safely and without damaging healthy tissue. In-vitro and clinical studies of HOCl show it to safely manage skin abrasions, lacerations, minor irritations, cuts, and intact skin.

A world map with a grid of latitude and longitude lines. Numerous small circles are placed across the map, representing distribution points. Lines with arrows radiate from a central point in North America to these various global locations, illustrating the company's international reach.

Sonoma's products are sold either directly or via partners in over 55 countries worldwide. Sonoma actively seeks new distribution partners.

# Investment Highlights

**Hypochlorous  
Acid Industry  
Leader**

**Over 20 years of experience developing and manufacturing products containing HOCl, over 100 research articles, papers and clinical and case studies, active U.S. and international patents, and continual product innovation**

**22 U.S. FDA clearances as 510(k) medical devices, transition to MDR completed for all revenue-producing products in Europe, and extensive worldwide regulatory clearances**

**Utilized on millions of patients worldwide without a single report of serious adverse effect**

**Focused on billion-dollar markets in Rx and OTC dermatology, wound care, eye care, podiatry, animal health and non-toxic disinfectants, treating common injuries and managing irritations**

**Diverse  
Global  
Healthcare  
Business**

**Robust and diverse international partner network selling into over 55 countries and extensive worldwide regulatory clearances means products can be commercialized faster**

**FDA registered medical device and cosmetic manufacturing capabilities in Mexico lower COGS and create opportunities for volume plays**

# Sonoma's Microcyn<sup>®</sup> Technology

## Patented, Stabilized Triple-Action Topical Technology

- HOCl kills microbes including bacteria, fungi and viruses while assisting healing
- Relieves pain and itch
- Improves wound care by cleaning and moistening the wound and peri-wound area
- Safely manage skin abrasions, lacerations, minor irritations, cuts, burns, and intact skin
- Applications in dermatology include atopic dermatitis, scar treatment and daily care

## May replace other treatments with side effects or health concerns

- Overused antibiotics may cause deadly epidemics such as MRSA
- May replace steroids for some patients
- Avoids harmful ingredients such as benzoyl peroxide

## Cost Effective

- Reduces hospital/physician visits
- Medicare/hospital savings from reduced hospital stays

# Sonoma's Microcyn<sup>®</sup> Technology

## Unparalleled Safety

- No drug-to-drug interaction or contraindications
- Millions of patients treated worldwide without a single report of serious adverse effect
- 30+ human clinical trials with over 1,500 patients
- Products contain all-natural hypochlorous acid

## Industry Leader

- Strong U.S. and international regulatory portfolio
- Longer shelf life than most competitors while retaining efficacy
- Available in solution, hydrogel and in combination with silicone for scar treatment
- White label available with custom packaging and design
- Established Microcyn<sup>®</sup> brand
- State of the art manufacturing

# Over 100 research articles and case and clinical studies showcasing both the efficacy and safety of our Microcyn<sup>®</sup> technology

Received: 26 June 2019 | Revised: 25 November 2019 | Accepted: 10 December 2019

### Abstract

**Background:** Hypochlorous acid (HOCl), a naturally occurring molecule produced by the immune system, is highly active against bacterial, viral, and fungal microorganisms. Moreover, HOCl is active against biofilm and increases oxygenation of the wound site to improve healing. Natural HOCl is unstable; through technology, it can be stabilized into an effective topical antiseptic agent.

**Aim:** This paper focuses on the use of topical stabilized HOCl in wound and scar management for pre-, peri-, and postprocedures—including its ability to reduce the occurrence hypertrophic scars and keloids. The role of the product in other skin conditions is beyond the scope of this article.

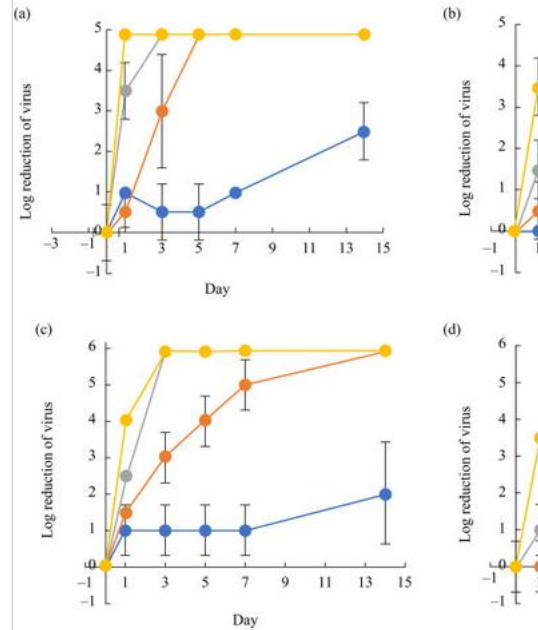

**Methods:** A panel comprising clinicians with experience in cosmetic and surgical procedures met late 2018 to discuss literature search results and their own current clinical experience regarding topical stabilized HOCl. The panel of key opinion leaders in dermatology and plastic surgery defined key insights and consensus statements on the direction of use for the product.

**Results:** Topical stabilized HOCl provides an optimal wound healing environment and, when combined with silicone, may be ideal for reducing scarring. Additionally, in contrast to chlorhexidine, HOCl, used as an antiseptic skin preparation, raises no concerns of ocular- or ototoxicity.

**Conclusions:** For wound care and scar management, topical stabilized HOCl conveys powerful microbicidal and antibiofilm properties, in addition to potency as a topical wound healing agent. It may offer physicians an alternative to other less desirable wound care measures.

### COVER FOCUS

## Optimizing Wound Healing for Cosmetic and Medical Dermatologic Procedures

Among the options for wound management is hypochlorous acid, a broad-action antimicrobial and anti-inflammatory agent.

BY ASHISH BHATIA, MD; JEFFREY HSU, MD; TODD SCHLESINGER, MD; AND ROBERT W.

Multiple factors influence wound healing. However, three primary conditions are essential for optimal wound healing with minimal risk of scarring. First, optimal wound healing requires the eradication of pathogenic bacteria and biofilm. Second, optimal wound healing requires an excellent blood supply and proper oxygenation. Finally, the proper immunological healing factors must be present in order for the wound to heal. With these optimal healing “primers” in place, the outcome is minimal scarring, rapid healing, and good structure and function of the healed wound site.

Physicians who perform aesthetic procedures, especially energy-based treatments or injections, are particularly focused on rapid healing, minimum pain, minimum down time, and optimal appearance. A controlled wound, as created with these tools and technologies, is associated with improved healing compared to uncontrolled or traumatic wounds. Nevertheless, proper wound care serves to further support healing for optimal cosmesis. Consider that, in some cases, aesthetic physicians are creating controlled wounds with the intention to revise existing scars, and the need to support wound healing becomes evident.

For dermatologists, wound care generally is focused on post-surgical management for biopsy and excision sites or post-procedural skincare following energy-based procedures or peels. At-home skin prep for excisions or Mohs micrographic surgery is not common. However, many patients interested in aesthetic procedures are advised to implement a skincare routine in advance of the procedure. In the aesthetic patient, retinoids and related compounds, botanical ingredients, growth factors, and antioxidants may be recommended individually or in combination, depending on the patient, the procedure, and the physician preference.

Increasingly, evidence suggests that the care immediately before a surgery or procedure and the healing phase can have important effects on outcomes. For years, dermatologists have relied on conventional options for peri-procedural skincare: antiseptics to cleanse the skin immediately before a procedure, petrolatum ointments immediately after a procedure, and topical antibiotic ointments to reduce the risk of emerging infection. Evidence and experience suggests that these may not be ideal.

The antiseptic preparations most commonly used in surgery in the US are iodopovidone and chlorhexidine. Iodopovidone dyes the clothing and the hair, and is associated with irritation and is noxious for some patients. Chlorhexidine can be toxic to tissues, especially in the eye. Therefore, procedural dermatologists have grown concerned about its use. However, chlorhexidine has practical benefits over betadine, and, at least has been an important option. Chlorhexidine prep hours—perhaps up to 72 hours—of antimicrobial can endure being washed with blood or fluids.

Use of topical antibiotic preparations for wound management is increasingly unpopular, due to concerns about development of bacterial resistance. Furthermore, topical antibiotics confer no activity against yeasts that reside on the skin and may infect wounds. Additionally, some topical formulations are associated with risks for allergic dermatitis. The associated inflammation in the wound is detrimental to wound healing and may contribute to redness, hyperpigmentation, or hypopigmentation. Alternative approaches to wound management prevention have been emerging. The use of rich plasma (PRP), which is increasingly being ad-

### Summary

**Background:** A pre-and postprocedure regime aimed at prevention of infection, reduction of inflammation and risk of scarring, is to enable optimal outcomes.

**Objectives:** The role of a hypochlorous acid containing spray and translucent scar gel formulation that combines modified silicon oil with hypochlorous acid, was explored for pre- and postprocedure treatment and scar management.

**Methods:** For this purpose a literature review was conducted to explore the value of the technology used in pre-and postprocedural regimes. A panel of dermatologists and plastic surgeons who practice in the United States discussed the summarized search results, taking into account their current clinical practice. A nominal group process for consensus was used, followed by online reviews of the manuscript.

**Results:** Based on panel discussions, consensus was reached regarding clinical recommendations given for postprocedure treatment and scar management. The hypochlorous acid products are produced with electrolysis and are classified among biocidal substances. The technology has demonstrated efficacy and safety for pre-and postprocedure use. The safety of hypochlorous solution use demonstrated to be comparable to that of standard local antiseptics. Small studies demonstrated better results with the scar gel compared to silicone gel regarding the appearance of hypertrophic and keloid scars, relief of associated pruritus and pain.

**Conclusions:** A postprocedure regime using this technology, aimed at preventing infection, reducing inflammation, and promoting healing is proposed to have benefits over current regimes as it appears to be effective, safe, and well tolerated.

### 1 | INTRODUCTION

Clinician concerns over pre-and postprocedure care and scar management are at the forefront. They are balancing antiseptic properties and cytotoxicity with severity of colonization to assure a proper healing environment and enhance outcomes. Our immune system

naturally produces a compound called hypochlorous acid (HOCl) to eradicate bacteria and other invading pathogens within the body. This compound has also shown antipruritic and anti-inflammatory effects.<sup>1,2</sup> A HOCl containing spray or super-oxidized solution for cleansing, irrigation, and disinfection of surgical sites (Alevyn-Dermal Spray) may decrease the risk of infection and optimize surgical

# Our Wound Care Business is Growing in the U.S. and Internationally

- Celebrating over **20 years** of selling wound care
- In August 2024, we added **Medline Industries, LP** as a U.S. distributor for our wound care products – Medline is one of the largest medical supply distributors in the United States
  - In October 2024, we expanded our partnership with Medline to include distribution in Canada, and OTC wound care sales to retailers in both countries
- We sell wound care across Europe and added a new distributor for wound care in Ukraine in 2024
- Expanding Product Lines: including new options for our **Microcyn® Negative Pressure Wound Therapy Solution** product line.
- Product innovation: In June 2023, we announced a new application of our Microcyn® technology for intraoperative **pulse lavage irrigation treatment.**

# Industry-Leading Safe and Effective Dermatology Products

- Products to relieve symptoms of atopic dermatitis, reduce scarring, and for daily skin care
- Line of office dispense products targeting growing med spa market
- National Eczema Association Seal of Acceptance
- National Psoriasis Foundation Seal of Recognition
- National Rosacea Society Seal of Acceptance
- All natural ingredients 
- No harmful chemicals
- OTC, office dispense, and Rx products available
- Innovating packaging available including both high end and cost competitive options

# Expanded Eye Care Product Line

- Sonoma has the strongest FDA indications for eye care in the HOCl industry
- OTC and prescription eye care sold into multiples channels
- Strong MDR-compliant CE Mark for blepharitis in the EU
- Animal health eye care sold in major chains including PetSmart and Tractor Supply

# Robust U.S. and International Distribution Network

OVER 40 GLOBAL PARTNERS AND GROWING

We continue to:

- Expand our presence in new markets by replicating what works in existing markets
- Add new distribution partners and grow existing relationships
- Co-develop innovative new products with partners
- Work with partners to seek new approvals and certifications

# CUTTING EDGE MANUFACTURING

Currently operating at 40% capacity  
with margin of approximately 35%

- 57,153 square foot state-of-the-art facility
- ISO 9001, ISO 13485 and cGMP certified
- MOH, KFDA, SFDA, KSA, TGA, EN, Biocide and numerous other national listings and approvals
- Global shipping into over 55 countries, with multiple methods for shipments
- Highly trained staff of over 160 employees
- Additional 11,840 square feet of overflow capacity

Flexible operations capable of **CUSTOM LABELING, SIZING, PACKAGING & DISPENSE MODES**

**High or small volume, large or small batch, delivered in 12 weeks**

# Growth Strategy

## Continue to introduce new high margin products

- Launch new applications of Sonoma's Microcyn® technology for consumer-focused products, including in the dermatology and aesthetic space

## Manufacturing capabilities can support significant future growth, leading to improved margins overall

- Efficient, flexible and FDA-regulated manufacturing facility currently operating at only 40% capacity
- Seek new manufacturing customers to utilize overflow space

## Expand Rx and OTC reach in U.S.

- Increase sales of dermatology products through the direct dispense model that generates Sonoma's highest margins
- Increase direct-to-consumer marketing in niche markets
- Seek retail partners for OTC products
- Expand eye care marketing for Rx and OTC

## Invest in R&D to expand commercialization opportunities

- Seek additional regulatory clearances for expanded indications
- Introduce new technology to new markets
- Fully commercialize robust pipeline of new products via direct-to-consumer sales or distribution partnerships

# New Market Opportunities

Sonoma is expanding its partnerships and product offerings in the eye care, all-natural skin care, medical spa and animal health care industries.

- The global **eye care** market size was estimated at USD \$70.78 billion in 2023 and is projected to grow at a compound annual growth rate (CAGR) of 6.72% from 2024 to 2030.<sup>1</sup>
- The global **natural skin care** products market size was valued at \$6.7 billion in 2021 and is expected to expand at a CAGR of 6.6% from 2022 to 2030.<sup>2</sup>
- The global **medical spa** market size was estimated at USD 18.6 billion in 2023 and is expected to grow at a CAGR of 15.13% from 2024 to 2030.<sup>3</sup>
  - North America dominated the medical spa market with a share of 41.1% in 2023, due to higher expenditure on wellness tourism than other regions.<sup>4</sup>
- The global **animal health** market size was valued at USD 62.89 billion in 2024 and is projected to grow at a CAGR of 10.46% from 2025 to 2030.<sup>5</sup>

# Recent Business Developments

## Expansion into U.S. consumer markets

- In August 2025 we announced the launch of our HOCl-based **diaper rash product** for infants and children into **Walmart**  and other large retailers in the United States.
- In March 2026, we announced the launch of our **advanced burn relief hydrogel** in Walmart and  stores in the United States.
- In March 2026, we announced the launch of **Aquanil<sup>®</sup> AD**, an HOCl-based dermatology product line for sensitive skin, developed exclusively for **Persōn & Covey, Inc.**

# Recent Business Developments

## Introduction of new products using our Microcyn<sup>®</sup> technology

- In December 2024, we announced the relaunch of our prescription eye care product, **Acuicyn<sup>®</sup>**, our prescription dermatology products **Celacyn<sup>®</sup>**, **Levicyn<sup>®</sup>** and **Epicyn<sup>®</sup>**, and our over-the-counter **Lasercyn<sup>®</sup> Dermal Spray** and **Lasercyn Gel**.
- In September 2024, we announced the consumer-friendly redesign of **Ocucyn<sup>®</sup> Eyelid & Eyelash Cleanser**.
- In April 2024, we announced expansion of our **Microcyn<sup>®</sup> Negative Pressure Wound Therapy Solution** product line, now available in 250mL, 450mL and 990mL sizes to meet the diverse needs of healthcare professionals and patients.
- In January 2024, we launched **Lumacyn<sup>™</sup> Clarifying Mist**, a new direct-to-consumer skincare product in the United States. Lumacyn is an all-natural daily toner formulated with Microcyn technology to soothe the skin and relieve irritation.
- In June 2023, we announced a new application of our Microcyn technology for **intraoperative pulse lavage irrigation treatment**, which can replace commonly used IV bags in a variety of surgical procedures.
- Our **MicrocynAH<sup>®</sup>** products are now available through **Pets at Home**, with over 450 stores across the UK, through our partner **Compana Pet Brands**.

# Recent Business Developments

## Expanding commercialization opportunities by investing in R&D

- We successfully transitioned all of our commercialized products in Europe, including **eye care, wound care, scar gel, acne products** and **atopic dermatitis products** to the new European Union (EU) **Medical Device Regulation (MDR)**.
- Our manufacturing facility and five of our products are successfully registered with the **Medicines & Healthcare products Regulatory Agency (MHRA)** in the United Kingdom, including our wound irrigation solution and hydrogel, scar management products and acne products.
- In October 2025, we successfully registered our manufacturing facility and listed our Microcyn-based facial spray under the FDA's **Modernization of Cosmetics Regulation Act of 2022 (MoCRA)**
- In 2024 we received **two new 510(k) clearances** from the FDA, including specific over-the-counter indications for the **face, eyelid** and **eyelashes**, as well as improved biocompatibility for our Microcyn-based solution and hydrogel.
- Reliefacyn® Advanced Itch-Burn-Rash-Pain Relief Hydrogel was awarded the **NATIONAL ECZEMA ASSOCIATION SEAL OF ACCEPTANCE™**, the **NATIONAL PSORIASIS FOUNDATION SEAL OF RECOGNITION**, and the **NATIONAL ROSACEA SOCIETY SEAL OF ACCEPTANCE**.
- A recent publication in the journal *Neurourology and Urodynamics* highlighted the potential for **Microdox®** in the management of urinary tract infections, or UTIs, in children with neurogenic or non-neurogenic bladder dysfunction.<sup>1</sup>

# Recent Business Developments

## Continuously expanding our distributor network

- In January 2025, we partnered with **WellSpring Pharmaceutical Corporation** for the sale of our Microcyn technology-based products to large retailers in the **United States**.
  - *In March, June and July 2025, we expanded our agreement with WellSpring to include additional consumer focused products.*
- In April 2025, we announced the launch our of acne products in the **United Kingdom** through a leading health and beauty retailer and pharmacy chain.
- In August 2024, we announced a new distribution agreement with **Medline Industries, LP** for the marketing and distribution of our wound care products in the **United States**.
  - *In October 2024, we expanded our agreement with Medline for marketing and distribution of our wound care products in **Canada**, and the sale of OTC wound care products to retailers in both countries.*
- In July 2024, we announced a new distribution agreement for wound care in **Ukraine**.
- Our partner **Brill Pharma SL** is now selling Sonoma's eye care products in **Italy**, **Spain**, and **Portugal**.
- In January 2023, we entered into a distribution agreement with **Daewoong Pharmaceutical Co., Ltd.**, one of the largest pharmaceutical companies in **South Korea**, for marketing and distribution of **Primocyn™ Skin Solution** products

# Key Financial Metrics

## *Fiscal year ended March 31, 2025 -*

- **Revenues increased 12%** compared to FY 2024
- **Net loss improved 29%** compared to FY 2024
- **EBITDA loss improved 17%** compared to FY 2024

## *Three and nine months ended December 31, 2025 –*

- **Revenues increased 22%** for the quarter and **33%** for the nine months compared to same periods last year
- **Net loss improved 12%** for the quarter and **3%** for the nine months compared to same periods prior year
- **EBITDA loss improved 37%** for the quarter and **33%** for the nine months compared to same periods last year
